Education

Saintgits College Of Engineering

Bachelor of Technology in Computer Science (CGPA 7.5/10)

2021 - 2025

Kottayam, Kerala, India

Government Higher Secondary School,Vakkanadu

Higher Secondary Education (Percentage 97.16%)

2019 - 2021

Kollam, Kerala, India

Technical Skills

Languages: Python, C

Operating Systems: Windows, Linux

Database: SQL, Firebase

Frameworks and tools: React.JS, Git, Flutter

Experience

CodeCrypt | Intel Unnati Industrial Trainee | C, OpenSSL, React.JS, firebase

May 2024 - July 2024

- Part of the development team for CodeCrypt, an interactive tool designed to simulate and experiment with various cryptographic techniques using OpenSSL and C as the backend.
- Developed and implemented algorithm support for RSA, AES, DES, and SHA, enabling users to encrypt and decrypt different data types including text, files, audio, images, and videos.
- Contributed to the project's documentation, providing clear and concise instructions for setting up, using, and understanding the tool's features.

Projects

VersaBot | Academic | MIT App Inventor, Arduino (C++), Firebase

2024

- Part of the development team for VersaBot, a fully functional prototype of a scaled-down delivery robot designed for use in restaurants, healthcare facilities, and warehouses, controlled via a mobile app.
- Developed the mobile application with MIT App Inventor, featuring user account management, Bluetooth connectivity, destination selection, manual control, and feedback system.
- Implemented robot features such as object detection, versatile payload tray for item delivery, and manual control capability through the mobile app.

AutoMed | Academic | ROS2, Raspberry Pi, Lidar, Flutter, Firebase

2024-2025

- Developed AutoMed, an autonomous medical delivery robot for indoor healthcare environments using ROS2, Raspberry Pi 4B, and RPLidar, with dynamic obstacle avoidance and efficient path planning.
- Built a hardware setup to make the robot easy to maintain and support reliable medical delivery tasks.
- Designed a Flutter-based mobile app for user control, authentication, and real-time robot management to ensure seamless medical deliveries.

Online-Store | React.JS, Firebase, DummyJSON API

2024

- Designed and developed a minimalist e-commerce website with intuitive navigation and elegant UI.
- Implemented product listing and detail views by integrating the DummyJSON API, ensuring quick and dynamic content rendering.
- Enabled user authentication and persistent cart functionality using Firebase, supporting seamless login and purchase workflows.

Certifications

- * Introduction to Operating Systems | Academic | NPTEL
- * Summer Internship on Digital Skills | Internship | ICT Academy of Kerala
- * The Bits and Bytes of Computer Networking | Academic | Coursera
- * Introduction to Web Development with HTML, CSS, JavaScript | Academic | Coursera
- * Introduction to Cloud Computing | Academic | Coursera
